The Wessex HAS.3 was an improved version of the previous HAS.1 helicopter. Between 1965 and 1968, forty-three HAS.1 models were upgraded to the new standard, easily recognisable for the dorsal dome of the search radar that gave the HAS.3 its nickname "Camel". Apart from this aspect, the modifications focussed mainly on the flight stabilisation system and the mission equipment, including the more effective Plessey sonar (...) The Macchi MC 202 Folgore has been a real innovation for the Italian Regia Aeronautica fighter squadrons. Extraordinarily beautiful, from the aerodynamic point of view, it was equipped with the powerful German engines produced under license by the Italian manufacturers. Thanks to the new engines and the strength of the project, the Macchi MC 202 become immediately an effective "dogfighter" (...)

## Me 410 "Hornisse"

**Decals for 3 versions** 

This sleek twin-engine plane is an evolution of the ME-210 which was supposed to substitute the M-110 as a heavy fighter plane. This plan did not materialize due to serious problems with the aircraft's engines (...)

**The hologram includes the sequence number assigned to each box as a guarantee of limited edition.**

# LEONARDO DA VINCI

## THE MARVELLOUS MACHINES

### No 3108 FLYING MACHINE - ORNITHOPTER

The ornithopter is a machine designed to fly by the flapping of its wings in imitation of birds. In 1485, Leonardo da Vinci began to study the flight of birds. He grasped that humans are too heavy, and not strong enough, to fly using wings simply attached to the arms. Therefore he sketched a device in which the aviator lies down on a plank and works two large, membranous wings using hand levers, foot pedals, and a system of pulleys.
