Dear Modeler and Hobbyist:

Welcome to **HobbyBoss!**

We are a manufacturer specializing in injection molded plastic model kits. We bring a new and unique approach to our tool making and manufacturing of high quality low priced model kits by utilizing new technologies in the design, development, and the manufacturing of our model kits.

We are excited to offer you through our distributors world wide, top quality model kits. The combination of quality and fair prices appealing to a modeler's primary desires is our primary goal!

Many new releases will be coming soon to the market in the future We are ready to set a new standard in injected molded plastic model kits.

Please check our website for the latest news regarding our products. Please visit www.HobbyBoss.com !

Happy modeling!

HobbyBoss

A-6A Intruder

美国A-6A "入侵者" 攻击机

81708

The Grumman A-6 Intruder was designed as the replacement of the A-1 Skyraider. It's the first all-weather attack aircraft of the US Navy. The aircraft were called as the A2F before 1962 and got the new name, the A-6 Intruder, in service. The outstanding all-weather capability soon made the A-6 the main strike force of the Navy and Marines, and devoted into the Vietnam War.

The A-6A were equipped with the DIANE system, which the most advanced navigation / targeting system at that time. But the problems of the reliability were solved after few years. There are 480 A-6As were built and 47 of them were upgrade to other type.

French Saint-Chamond Heavy Tank - Early

法国圣沙蒙重型坦克-早期型

83858

The Saint-Chamond was the second French heavy tank of the First World War, with 400 manufactured from April 1917 to July 1918. Born of the commercial rivalry between the makers of the Schneider CA1 tank, the Saint-Chamond was an inadequate design. Its principal weakness was the "caterpillar" tracks. They were much too short in relation to the vehicle's length and heavy weight (23 tons). Later models, however, attempted to rectify some of the tank's original flaws by installing wider and stronger track shoes, thicker frontal armor and the more effective 75mm Mle 1897 field gun. The Saint-Chamond tanks remained engaged in various actions until the late summer of 1918, belatedly becoming more effective after combat had moved out of the trenches onto open ground. Eventually, however, the Saint-Chamond tanks were scheduled to be entirely replaced by imported British heavy tanks.

Nagmashot and Nagmachon is a heavily armoured infantry fighting vehicle fielded by the Israel Defence Forces. The Nagmachon evolved from the NagmaShot APC, which in turn was based on Centurion Sho't hulls from the 1970s and 1980s. The vehicle carries thick belly armour designed to withstand mine-blasts and mountings on the front hull for various engineering devices such as mine plows, mine rollers and dozer blades.

Early Nagmachons were equipped with three armoured shields to give soldiers firing the mounted FN general-purpose machine guns some degree of protection from small arms fire. Later Nagmachons were fitted a distinctive raised superstructure, sometimes referred to as a 'doghouse'. The raised superstructure and increased mine protection have made the Nagmachon an ideal platform for counter-insurgency and urban operations, seeing much use in the al-Aqsa Intifada within the occupied territories and southern Lebanon in 2006. It is often used as an engineering vehicle and a carrier for sappers, although its main role has been to carry infantry.

Soviet BA-20 Armored Car Mod.1937
前苏联BA-20装甲车1937年型

83882

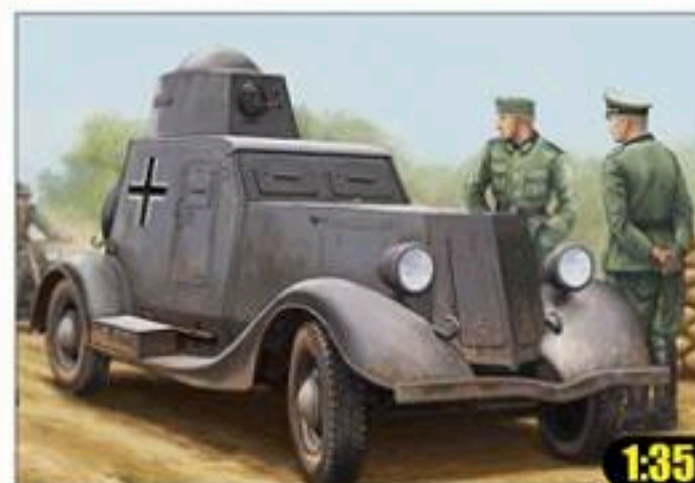

The BA-20 armored car was developed in 1934 for use by headquarters, staffs, reconnaissance and communications units. It was derived from the civilian GAZ-M1 car using its chassis, which was itself a modified version of a Ford design, produced by the Nizhny Novgorod-based vehicle manufacturer GAZ. Full production of the BA-20 started in 1935. The chassis was built at the Nizhny Novgorod factory; the body was built at the Vyksinskiy plant, where final assembly of the BA-20 occurred as well.

83889

The Steyr ADGZ was originally developed as a heavy armored car for the Austrian army (its designation was "M35 Mittlere Panzerwagen") from 1934 and delivered from 1935-37. The Austrian army was using the ADGZ armored car at the time of Anschluss. 12 were used by the army and 15 were used by the police. The Germans used them for police work and some were taken on by the SS and used on the Eastern front and in the Balkans. The SS ordered an additional 25 ADGZ which were delivered in 1942. An interesting feature of this vehicle was that there was no "rear:" either end was capable of driving the unit.

44M TAS ROHAMLOVEG

44M TAS坦克歼击车

83898

Tas Rohamloveg was a tank destroyer project, developed along with the 44M Tas tank, based on the same chassis. It was started in 1944, when some of the officers involved in the 44M Tas design came up with an idea that it wouldn't be actually bad to start a project of a heavy tank destroyer along with the tank development. They were influenced no doubt by the successes of such German vehicles, that were not only extremely deadly, but also cheaper to build than regular tanks. Their silhouette was also lower, they were harder to spot, easier to set an ambush with and generally suitable for the defensive warfare both the German and Hungarian armies found themselves in.

Ukraine KrAZ-6446 Tractor with MAZ/ChMZAP-5247G semitrailer
乌克兰KrAZ-6446牵引车(带MAZ/ChMZAP-5247G 型半挂车)

85513

The KrAZ-6446 tractor truck was developed in Ukraine by AvtoKraz. It was developed from the KrAZ-6322 6x6 heavy utility truck. It is a successor to the previous KrAZ-260V. Vehicle is designed to operate on all kinds of roads.

The KrAZ-6446 is intended to haul semi-trailers. It can operate on all kinds of roads and in off-road condition. Fifth-wheel permissible vertical load is 11.4 t. Vehicle can tow a semi-trailer with a maximum weight of 23 t on all kinds of roads and up to 34 t on hard surface roads.

This Ukrainian tractor truck is used to transport armored vehicles or heavy construction equipment. It is also used to haul semi-trailers with the S-300PMU-1 air defense missiles.

Design of this military truck is simple and robust. The KrAZ-6446 is powered by Russian YaMZ-238D turbocharged diesel engine, developing 330 hp. Vehicle is also proposed with improved YaMZ-238DE2 diesel engine, which meets EURO II emission requirements. This tractor truck shares a number of automotive components with the KrAZ-6322 heavy utility truck.

Marder III Ausf.M Tank Destroyer Sd.Kfz.138 - Late
黄鼠狼III M坦克歼击车-后期型

80168

The last Marder III variant was based on the Geschützswagen 38(t) Ausf. M, a purpose-designed vehicle for self-propelled gun use, again armed with the 75 mm PaK 40 anti-tank gun. Ausf. M was the final variant of the Marder series and was a significant improvement over previous models, with its lower silhouette, sloped armor and much more functional fighting compartment. In this variant, the engine was moved from the rear to the middle between driver and the rest of the crew. Because there was no engine in the rear, the gun and the crew did not have to sit on top of the engine deck as in previous models. The fighting compartment could be lowered down to the bottom floor level where the engine used to be, which decreased crew exposure, as well as visibility. Unlike the previous two Marder IIIs, the fighting compartment was closed at the rear, protecting the crew up to their midsection. It stayed open-topped. It could carry only 27 rounds of ammunition. The machinegun port at the front was eliminated in the Ausf. M in favor of an MG 34 or MG 42 carried by the crew.

83527

The German Type 212 class, also Italian Todaro class, is a highly advanced design of non-nuclear submarine (U-Boat) developed by Howaldtswerke-Deutsche Werft AG (HDW) for the German Navy and Marina Militare. It features diesel propulsion and an additional air-independent propulsion (AIP) system using Siemens proton exchange membrane (PEM) hydrogen fuel cells. The submarine can operate at high speed on diesel power or switch to the AIP system for silent slow cruising, staying submerged for up to three weeks without surfacing and with no exhaust heat. The system is also said to be vibration-free, extremely quiet and virtually undetectable.
